Frequently Asked Questions About Immaterial Architecture, Field Practice, and Atmospheric Design

An introduction to Blissbode's work with Atmospheric Consciousness Design™, Immaterial Architecture, and Regenerative Environments.

Author:

Bonna Ravn Thomsen
Founder, Blissbode
Developer of Immaterial Field Architecture™

Version 1.0
September 2026

About This Document

This document introduces Blissbode's methods, concepts, and services within Atmospheric Consciousness Design™, Immaterial Architecture, and regenerative practice.

Descriptions of potentials, resonances, field structures, and environmental conditions should be understood as design-oriented and atmospheric perspectives. They are not intended to replace medical, legal, financial, or psychological advice.

©2026 Bonna Ravn Thomsen. Alle rettigheder forbeholdes.

Blissbode includes what many people seek through house cleansing and space clearing and expands it into Atmospheric Consciousness Design™, a measurable architectural methodology that even experienced practitioners come to learn.

---

1. What Is Regenerative Field Design?

Regenerative Field Design is Blissbode's signature service.

It is a profound architectural transformation of the immaterial field of a home, workplace, or environment, where structures such as Consciousness Points, Opportunity Fields, Support Fields, and Prosperity Fields are designed, installed, and calibrated.

Rather than changing the physical layout of a space, Regenerative Field Design works with the subtle architecture that influences how an environment supports wellbeing, clarity, direction, resilience, and development.

It is architecture within the subtle layer, not physical interior design.

---

2. What Is the Difference Between Regenerative Field Design and Regenerative Field Analysis?

Regenerative Field Analysis is a comprehensive and curated assessment.

No energetic intervention takes place, and no Consciousness Points are installed. Instead, the analysis provides strategic recommendations together with a detailed evaluation of resonances, influences, environmental conditions, and developmental potential.

Regenerative Field Design, by contrast, is a complete transformation of the immaterial conditions that shape an environment.

Through the installation of Consciousness Points, Opportunity Fields, Support Fields, and Prosperity Fields, the environment is redesigned to support greater coherence, flow, stability, and wellbeing.

The process is designed to elevate environmental vitality to approximately 800 QU in private homes and 1000+ QU in professional environments, businesses, and organisations.

A Premium Completion Report is included as part of the process.

---

3. What Is a Complimentary Resonance Report?

The Complimentary Resonance Report provides an introductory assessment of the subtle layers of a home or environment.

The report includes:

- Overall QU level
- Number of registered resonances
- Number of potential Consciousness Points

©2026 Bonna Ravn Thomsen. Alle rettigheder forbeholdes. www.Blissbode.live

Blissbode.Live

- General atmospheric influences and patterns

It offers a gentle and accessible first step for those wishing to understand the atmospheric conditions of an environment before pursuing a more comprehensive analysis or design process.

No detailed diagnostics or strategic recommendations are included.

---

4. How Do I Know Which Service to Choose?

If you are unsure where to begin, the following guide may help:

Complimentary Resonance Report

For those seeking an initial overview and a first impression of the environmental field.

Regenerative Field Analysis

For those seeking deeper insight, strategic understanding, and a comprehensive assessment before making decisions.

Regenerative Field Design

For those seeking a complete transformation of the subtle architecture of their environment.

Atmospheric Regulation

For those seeking a focused harmonisation of one to three rooms without installing field structures.

Interior Design Project

For those wishing to translate atmospheric insights into tangible changes through colours, materials, layouts, and spatial design.

Consciousness Point Maintenance

For those who already have Consciousness Points installed and wish to maintain alignment, vitality, and long-term effectiveness.

Services and Applications

5. What Is Atmospheric Regulation?

Atmospheric Regulation is a light and focused harmonisation of one to three rooms.

It is not Field Architecture. Instead, it is a targeted adjustment of the atmosphere of a space.

The service is particularly well suited to rooms or areas that feel heavy, unsettled, draining, stagnant, or lacking vitality.

Atmospheric Regulation provides a precise intervention within the subtle layers of an environment, helping to restore balance, clarity, and ease without installing field structures or redesigning the broader architectural field.

6. What Is the Difference Between an Interior Design Project and Field Design?

An Interior Design Project works with the physical layers of an environment through colours, materials, forms, furnishings, flow, and functional placement.

Regenerative Field Design works with the immaterial architecture that shapes how a place is experienced, including Consciousness Points, Opportunity Fields, Support Fields, and Prosperity Fields.

While one works through physical design and material expression, the other works through the subtle structures that influence the atmosphere and developmental potential of a place.

The two approaches complement one another and may be combined for maximum effect.

---

7. Can Regenerative Field Design Be Applied in a Business Environment?

Yes.

Businesses, retreat centres, educational environments, clinics, studios, and organisations often benefit from Regenerative Field Design.

Professional environments frequently experience:

- Higher QU levels
- Additional Consciousness Points
- Expanded Opportunity Structures
- Enhanced Prosperity Fields
- A Premium Completion Report
- Ongoing field maintenance and recalibration

Many organisations begin with either a Complimentary Resonance Report or a Regenerative Field Analysis in order to gain a clearer understanding of existing environmental conditions and developmental opportunities.

---

8. How Is Pricing Determined?

Investment levels are determined by several factors, including:

- The size of the environment
- Overall complexity
- The number of structures involved
- Existing QU levels
- Desired outcomes and objectives
- Residential or professional application

Blissbode currently offers three pricing tiers:

Ambassador Pricing

©2026 Bonna Ravn Thomsen. Alle rettigheder forbeholdes. www.Blissbode.live

Blissbode.Live

Designed for clients who actively support the dissemination of the work through referrals, introductions, and case sharing.

Standard Pricing

The most common choice for private and professional projects.

Premium Pricing

Reserved for larger, more complex environments requiring deeper levels of analysis, design, calibration, and implementation.

Because every environment is unique, pricing is always based on the specific circumstances, objectives, and developmental potential of the project.

The Method Behind the Work

9. What Are Consciousness Points?

Consciousness Points are subtle and intelligent structures established as part of a Regenerative Field Design.

They create environmental conditions that may support:

- Stability
- Calm
- Clarity
- Prosperity
- Direction
- Flow
- Health and vitality

Consciousness Points are not physical objects. They are architectural structures within the subtle field that are designed to support the overall coherence and developmental capacity of an environment.

They are typically maintained every two years through Consciousness Point Maintenance.

---

10. What Are Opportunity Fields, Support Fields, and Prosperity Fields?

These are architectural structures within the immaterial field.

Opportunity Fields

Opportunity Fields create environmental conditions that support direction, momentum, development, and flow.

They help align an environment with movement, possibility, and future-oriented growth.

Support Fields

Support Fields create stability, grounding, and access to resources.

©2026 Bonna Ravn Thomsen. Alle rettigheder forbeholdes. www.Blissbode.live

Blissbode.Live

Their purpose is to strengthen the environmental foundations that allow people, projects, and organisations to develop from a place of greater coherence and resilience.

Prosperity Fields

Prosperity Fields establish environmental conditions that support both financial and creative expansion.

They are not guarantees of outcomes. Rather, they strengthen the conditions that may support growth, opportunity, visibility, and development.

These structures are installed exclusively through Regenerative Field Design and may be further strengthened at an individual level through an Interior Design Project.

---

11. What Is a Premium Completion Report?

The Premium Completion Report is the curated documentation of the work carried out through Regenerative Field Design.

The report includes:

- Before-and-after QU measurements
- An overview of all established structures
- Opportunity Fields, Support Fields, and Prosperity Fields
- Transformation Point
- Harmonisations
- Maintenance recommendations

The report also provides a description of the opportunities and developmental potential created by the newly regenerative environment.

It explains how Opportunity Fields, Support Fields, and Prosperity Fields may support your direction, projects, creativity, and ability to transform ideas into tangible outcomes.

The purpose is not to predict the future or create results on your behalf.

Rather, the purpose is to make visible the conditions your environment now offers, allowing you to engage these opportunities with greater clarity, intention, and free will through a more coherent and regenerative field.

---

12. How Does Regenerative Field Design Work?

The process typically includes:

1. Complimentary Resonance Report
2. Regenerative Field Analysis
3. Harmonisation of Resonances
4. Design of Gateway Structures, Support Fields, and Prosperity Fields
5. Installation of Consciousness Points
6. Field Calibration

©2026 Bonna Ravn Thomsen. Alle rettigheder forbeholdes. www.Blissbode.live

Blissbode.Live

7. Premium Completion Report

Regenerative Field Design is not a single intervention but a structured architectural process through which the subtle layers of an environment are analysed, harmonised, designed, and calibrated to support long-term development and wellbeing.

---

13. How Often Should the Field Be Maintained?

A field is typically maintained every two years through Consciousness Point Maintenance.

Regular maintenance helps ensure that Consciousness Points remain aligned with your current direction, objectives, and developmental trajectory while preserving the overall coherence of the regenerative field.

House Cleansing, Space Clearing, and Spirituality

14. Is Blissbode a Form of House Cleansing or Space Clearing?

Yes. Blissbode includes many of the outcomes people often seek through house cleansing and space clearing, while extending the work far beyond both traditions.

Traditional house cleansing and space clearing frequently focus on removing heavy energy, old imprints, or unwanted environmental influences.

Blissbode analyses and harmonises more than 300 different resonance patterns in order to understand and optimise the unique conditions affecting a particular environment.

In other words, Blissbode works with:

The architecture of the subtle field.

We do not merely harmonise energy.

We design it.

We regulate it.

We build it.

We activate it.

We teach you how to understand it.

Where house cleansing removes something, and space clearing lightens something, Blissbode builds something.

---

15. So Blissbode Is a Form of Clearing, but Also Something More?

Exactly.

©2026 Bonna Ravn Thomsen. Alle rettigheder forbeholdes. www.Blissbode.live

Blissbode.Live

Blissbode provides the sense of relief many people seek through clearing while simultaneously introducing a profound structural transformation of the environmental conditions that shape daily life.

Where clearing focuses primarily on symptoms, Blissbode works with:

- Field Architecture
- Nervous System Response
- Atmospheric Intelligence
- Regenerative Design
- Embodied Perception
- Measurable Resonance Patterns

This is why the outcomes are often deeper, more stable, and more enduring over time.

---

16. Can Blissbode Replace House Cleansing or Space Clearing?

Yes.

For most people, Blissbode can replace both house cleansing and space clearing because it creates structural stability rather than temporary relief.

The intention is not simply to remove unwanted influences, but to establish environmental conditions that actively support wellbeing, direction, development, and human flourishing.

---

17. What Makes Blissbode More Effective Than Clearing?

Blissbode changes the system rather than merely addressing symptoms.

Where conventional clearing methods often focus on what should be removed, Blissbode focuses on what can be designed, strengthened, stabilised, and supported.

The result is a deeper architectural intervention that works with the underlying field conditions shaping the experience of an environment.

---

18. Why Do Experts in Clearing and House Cleansing Come to You for Training?

Because Blissbode operates at a deeper architectural level and offers tools, frameworks, and methodologies that many traditional approaches do not address.

Practitioners often come to learn the architectural layer of environmental influence that their existing methods rarely reach.

For many, this provides an entirely new understanding of how environments can be analysed, designed, measured, and calibrated.

---

19. Is Blissbode Spiritual?

©2026 Bonna Ravn Thomsen. Alle rettigheder forbeholdes. www.Blissbode.live

Blissbode.Live

Blissbode is not a spiritual ritual, nor is it a belief-based practice.

The work is rooted in a daily consciousness practice that supports the ability to engage with the subtle layers of an environment.

This practice enables work within the field beyond conventional perceptions of time and space while remaining grounded in observation, calibration, and design.

The practice is neither religious nor dogmatic.

Instead, it functions as a discipline of consciousness that expands perceptual capacity and makes subtle-layer design possible.

This is where what many people might describe as "magic" becomes structured, architectural, measurable, and repeatable.

Who Is Blissbode For?

20. Who Is Blissbode For?

Blissbode is for people seeking:

- Calm
- Clarity
- Direction
- Wellbeing
- Coherence

It is also designed for practitioners, designers, architects, leaders, and organisations seeking a deeper understanding of the atmospheric and immaterial layers of the built environment.

Ultimately, Blissbode is for those who wish to live, work, and create within environments that actively support wellbeing, development, agency, and human potential.
